Using an External Amplifier

Connecting the BigSound™ 2K2 to an external amp

The BigSound™ 2K2 sound board comes equipped with a line level audio output. This will be most useful to those who are utilizing the system in either stand-alone applications (such as under the layout installations) or ride-on locomotives. This output enables the 2K2 board to be wired directly to an amplifier or other audio device with a line level input. The Phoenix board outputs a high quality MONO audio signal through this output. The line out is accessed by terminals 3 (signal) and 5 (ground) on the BigSound™ board.
